EDUCATION

Sharif University of Technology

Tehran, Iran

B.Sc. in Computer Science, Minor in Economics

- **CS Coursework:** Probability, Statistics, Linear Algebra, Calculus, Data Structures, Algorithms, Machine Learning, Deep Learning, Linear Optimization
- **Economics Coursework:** Economics Fundamentals, Microeconomics, Financial Economics

EXPERIENCE

Boursetech

Tehran, Iran

Data Scientist (Part-time)

Aug 2025 – Jul 2026

- Built automated ingestion pipelines consolidating 10+ heterogeneous data sources, cutting data-to-decision latency from 24h to under 1h.
- Orchestrated 5+ production pipelines in Apache Airflow spanning ingestion, feature engineering, and scheduled inference.
- Deployed Metabase dashboards for cross-functional stakeholders, enabling self-serve analytics on model and business KPIs.
- Ran controlled holdout experiments across 20+ feature/model variants, using A/B testing and causal inference to measure uplift.
- Trained classification/regression models with measurable F1 improvement over baseline, deployed in live investment decisions.
- Built a similarity scoring engine using correlation matrices and clustering across 50+ assets for ranking and retrieval.
- Designed and deployed FastAPI microservices decoupling data collection from analysis, enabling team-wide API access to live data.

Amina Group

Tehran, Iran

AI Engineering Intern

Feb 2025 – Jul 2025

- Developed a production conversational agent; analyzed session logs to identify funnel drop-off points and improve task completion rate.
- Built a Persian-language semantic embedding model for similarity search and nearest-neighbor retrieval across a large item catalog.
- Designed a content deduplication system using similarity scoring, reducing duplicate content across the platform catalog.
- Automated content generation and enrichment with GPT-based pipelines, cutting turnaround time from days to hours.
- Implemented GPT-assisted crawling pipelines for structured data extraction at scale.

PROJECTS

USD/JPY Market Strategy Analysis

2024

Python, MetaTrader, Scikit-learn

- Real-world trial project for an external firm analyzing macro/microeconomic factors driving profitability in the USD/JPY forex market.
- Backtested multiple ML models on 1–2 years of OHLCV and sentiment data, using hypothesis testing to validate strategy performance; findings presented to and adopted by the firm.

SKILLS

Programming: Python, Java, R, SQL, Git

Libraries & Tools: Pandas, NumPy, PyTorch, Scikit-learn, FastAPI, Docker, NLTK

Data & MLOps: Apache Airflow, Metabase, Web Scraping, Feature Engineering, A/B Testing, Experiment Design, Statistical Analysis

Mathematics: Probability, Linear Algebra, Statistics, Causal Inference

Languages: Persian (Native), English (Fluent)
